

C20 - Portable CPT Container

The C20 Cone Penetration Testing unit and container is one of Gregg's most popular combinations. This direct push only configuration is a fully enclosed work station that allows crews to advance direct push CPT tools and samplers from inside a climate controlled environment. During winter and night-time operations, the enclosed direct push workstation provides advantages with respect to worker safety and productivity. Gregg's versatility allows us to use fit-for-purpose work station solutions in the various work environments we operate in, maximizing worker safety and productivity.

Dimensions:

Width: 2.44m (8') | **Length:** 4.57m (15') | **Height:** 2.59m (8.5') | **Weight:** 3,409kg (7,500 lbs)

CPT Specifications:

- 20-ton push frame with integrated cone rod wash system
- 15 10, and 5 sq. cm. cones
- Vane shear, and push samplers
- Passive Gamma Cone
- Seismic both surface and subsea
- Integrated Gregg DAS System
- 100m pre-strung cone rod storage

Container Features:

- Restroom with chemical toilet
- Heating and Air Conditioning
- 12V DC and 110V AC Electrical Systems
- Lighting
- Sink with Hot and Cold Water
- Gray Water Tank
- Powered by an auxiliary HPU and generator
