

Morooka 2200 CPT

The Gregg MK011 Rubber Track Morooka 2200 carrier unit is designed specifically for low ground pressure access and has a low tread pressure suitable for work on soft and/or rough terrain. The MK011 is outfitted with levelling jacks and a drill-out rig. This platform is paired together with Gregg's modular C20 Direct Push CPT workstation.

The C20 direct push workstation is purpose-built for modular use on various carriers and allows our operations crews to work efficiently across multiple platforms. The C20 features a 20/25 ton push/pull capacity ram set located over the centre of the vehicle for CPT tool advance; data acquisition systems set for maximum operator utility; and provides crews with a consistent climate controlled work environment. A consistent, well-lit workspace across test locations is an engineering control used to reduce safety exposure to environmental and rough terrain hazards.

Dimensions:

Width: 2.92m (9' 7") | **Length:** 6.14m (20' 2") | **Height:** 3.17m (10' 5")

Rig Features:

- Track Width: 30"
- Machine Weight 31,820lbs
- Horse Power: 250
- Travel Speed (Low – High) 8mph
- Ground Pressure (empty): 3.1 psi
- Ground Pressure (loaded): 5.7 psi
- Maximum Load 24,255lbs
