

## Cone Penetration Truck

Gregg's CPT truck features a 20-ton dual ram center push configuration capable of pushing CPT, Direct Push Soil Sampler and Direct Push Water Sampling gear. This truck also features an onboard seismic system.

The fully enclosed workstation allows for a consistent, well-lit workspace across test locations and is an engineering control used to reduce safety exposure to environmental and rough terrain hazards. This unit is operator focussed with a robust CPT design improving efficiency. The Gregg CPT truck was manufactured with a centralized push frame to allow high push forces to allow for efficient, single-pass, CPT soundings.

### **Dimensions:**

**Width:** 2.53m (8' 4") | **Length:** 9.3m (30' 6") | **Height:** 3.7m (12.2')

### **Rig Features:**

- Engine Power: 265 HP
- Push / Pull Capacity: 20 / 25 ton
- Complete rod guard ensuring safety
- Includes water ballast tanks to increase reaction weight
- Fully enclosed workstation
- On-board facilities
- Well lit workstation
- Integral seismic beam for sCPTu data collections
